CONTENTS VOLUME 55, 1989

Research Papers

Viscosity structure implied by mantle convection
F.D. Stacey, R.-S. Fu and S. Spiliopoulos (Brisbane, Qld., Australia) 1

On the stability of a fluid layer containing a univariant phase transition: application to planetary interiors
C. Sotin and E.M. Parmentier (Providence, RI, U.S.A.) 10

Comments on latitudinal dependence of MAGSAT anomalies in the *B* field and associated inversion instabilities
N. Basavaiah, M. Rajaram and B.P. Singh (Bombay, India) 26

Distortions in long-period geomagnetic variations owing to deep electrical inhomogeneities
A.M. Osella and E. Colombo (Buenos Aires, Argentina) 31

A palaeomagnetic test of the axial dipole assumption and implications for continental distribution through geological time
J.D.A. Piper and S. Grant (Liverpool, Gt. Britain) 37

Palaeomagnetism of the Upper Carboniferous Strzegom and Karkonosze Granites and the Kudowa Granitoid from the Sudet Mountains, Poland
E. Halvorsen (Sogndal, Norway), M. Lewandowski and M. Jeleńska (Warsaw, Poland) 54

Palaeomagnetic correlation and dating of mineralization and intrusive events
J. Urrutia-Fucugauchi and Z. Jurado-Chichay (Coyoacan, Mexico) 65

Magnetic mineralogy of some granites from the French Massif Central: origin of their low-field susceptibility
O. Jover, J. Luc Bouchez (Toulouse, France), P. Rochette, M. Maeder (Grenoble, France) and J.P. Lorand (Paris, France) 79

Palaeozoic palaeomagnetic results from Scotland and their bearing on the British apparent polar wander path
T.H. Torsvik (Trondheim, Norway), O. Lyse, G. Atterás (Bergen, Norway) and B. Bluck (Glasgow, Gt. Britain) 93

Mode of stress release within a subducting slab of lithosphere: implication of source mechanism of deep and intermediate-depth earthquakes
N. Sugi (Tokyo, Japan), M. Kikuchi (Yokohama, Japan) and Y. Fukao (Nagoya, Japan) 106

On the correlation between Earth tides and microseismic activity
B. Bodri and S. Iizuka (Shizuoka, Japan) 126

Focal mechanism of the 20 August, 1983, Caspian Sea earthquake
R.A. Clark and A. Graham (Leeds, Gt. Britain) 135

The New Ireland earthquake of July 3, 1985 and associated seismicity near the Pacific–Solomon Sea–Bismarck Sea triple junction
J. Mori (Rabaul, Papua New Guinea) 144

Ideal Fe–FeS, Fe–FeO phase relations and Earth's core
B. Svendsen, W.W. Anderson, T.J. Ahrens (Pasadena, CA, U.S.A.) and J.D. Bass (Urbana, IL, U.S.A.) 154

Creep of barium titanate perovskite: a contribution to a systematic approach to the viscosity of the lower mantle
S. Beauchesne and J.P. Poirier (Paris, France) 187

Special Issue: Physical Properties of Solid and Molten Earth Materials
Guest Editor: T.J. Ahrens

Contents iii
Foreword v

Research Papers
A critical re-examination of the thermodynamic basis of Lindemann's melting law
F.D. Stacey, S.S. Spiliopoulos and M.A. Barton (Brisbane, Qld., Australia) 201
Phase relations in iron-rich systems and implications for the Earth's core
W.W. Anderson, B. Svendsen and T.J. Ahrens (Pasadena, CA, U.S.A.) 208
The Grüneisen parameter and adiabatic gradient in the Earth's interior
F. Quareni and F. Mulargia (Bologna, Italy) 221
Plasticity–crystal structure systematics in dense oxides and its implications for the creep strength of the Earth's deep interior: a preliminary result
S. Karato (Tokyo, Japan) 234
Measurement of elastic constants of mantle-related minerals at temperatures up to 1800 K
O.L. Anderson and T. Goto (Los Angeles, CA, U.S.A.) 241
Q^{-1} of forsterite single crystals
Y. Gueguen, M. Darot (Strasbourg, France), P. Mazot and J. Woirgard (Poitiers, France) 254
Comparison of seven methods for the computation of Q
R. Tonn (Kiel, F.R.G.) 259
Deformation of peridotite at high pressure in a new molten salt cell: comparison of traditional and homologous temperature treatments
R.S. Borch and H.W. Green II (Davis, CA, U.S.A.) 269
Effects of iron and magnetite additions in olivine–pyroxene rheology
R.S. Hitchings, M.S. Paterson and J. Bitmead (Canberra, A.C.T., Australia) 277
The effect of pressure on the thermal conductivity of silicate rocks up to 12 kbar
K. Horai (Chiba, Japan) and J. Susaki (Tokyo, Japan) 292
Partial melting of rocks observed by the sound velocity method and the possibility of a quasi-dry low velocity zone in the upper mantle
S. Matsushima (Kyoto, Japan) 306
Determination of shear- and compressional-wave velocity variations and hypocenter locations in a rapidly inflating caldera: the Campi Flegrei
R.C. Aster and R.P. Meyer (Madison, WI, U.S.A.) 313
Experimental and spectroscopic constraints on the solubility of hydroxyl in quartz
M.R. Rovetta (Tempe, AZ, U.S.A.) 326
Dilatancy, creep and relaxation of brittle rocks measured with the 8000 kN multipurpose triaxial apparatus
T.K. Tan, Z.Q. Shi, Z.H. Yu and X.Y. Wu (Beijing, People's Republic of China) 335
Mechanical and transport properties of crustal rocks: from single cracks to crack statistics
T. Reuschlé, M. Darot and Y. Gueguen (Strasbourg, France) 353
Ductile behavior of a fine-grained porous basalt at room temperature and pressures to 3 GPa
M. Shimada, K. Ito and A. Cho (Takatsuki, Japan) 361
Piezoelectric and *a*-axes fabric along a quartz vein
M.M. Ghomshei (Vancouver, B.C., Canada) and T.L. Templeton (Burnaby, B.C., Canada) 374
Compression effects in rock–ice mixtures: an application to the study of satellites
J. Eluszkiewicz and J. Leliwa-Kopystyński (Warsaw, Poland) 387

Contents of Volume 55 399
